## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of group I in the reply filed on 10/8/04 is acknowledged.
2. This application contains claims drawn to an invention nonelected without traverse in Paper No. 10/8/04. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-8, 11-18 and 21-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Kato (WO 99/59309).

Regarding claims 1, 11 and 21, Kato discloses a connection setting apparatus comprising a connection information acquiring device that acquires first connection information from a plurality of apparatus connected to a network, each apparatus having at least one line (Page 13, lines 7-11, the device name setting 21 acquired the connection information of the nodes on the bus 1394 in order to form a table); and a generator that generates second connection information in accordance with the acquired first connection information (Page 13, lines 12-14, the device name setting 21 generates a ID device reference table based on the node ID table).

Regarding claims 2 and 12, Kato discloses an editor that edits the second connection information and a transmitter that transmits the edited second connection information (Page 13, lines 15-19, Revising the new connection information and transmitting to table for storing).

Regarding claims 3 and 13, Kato discloses an editor can edit to connect one apparatus to a plurality of apparatus (Page 14, lines 9-12).

Regarding claims 4 and 14, Kato discloses a display that displays a connection state in accordance with the second connection information (Figs 15 and 19).

Regarding claims 5 and 15, Kato inherently discloses an assigning device that assigns a name specific to each line by dividing lines into a data output side and a data input side for audio device such as camcorder.

Regarding claims 6 and 16, Kato discloses an editor that edits the second connection information by editing the connection state displayed on said display and a transmitter that transmits the edited second connection information (Page 13, lines 15-19, Revising the new connection information and transmitting to table for storing).

Regarding claims 7, 17 and 22, Kato discloses a connection information acquiring device that acquires first connection information from a plurality of apparatus connected to a network (Page 13, lines 7-11, the device name setting 21 acquired the connection information of the nodes on the bus 1394 in order to form a table); a generator that generates second connection information in accordance with the acquired first connection information (Page 13, lines 12-14, the device name setting 21 generates a ID device reference table based on the node ID table); an editor that edits the second connection information (Page 13, lines 15-19, Revising the new connection information and transmitting to table for storing); a transmitter that transmits
